

Install Addendum

1. The Coolplayer music player may not display the Color Chat “Skin” (shown to the right) after installation & Activation. The “Skin” can be changed to the Color Chat “Skin” as shown below.

1) Right-click the mouse over the Coolplayer window to display the menu.

2) On the menu, click “Options”

3) Check both the “Player” & “Playlist” options and use the “Open” buttons to open the “Plastiq.ini” file for the “Player” & open the “Playlist.ini” for the “Playlist”. These files are in the “MUSIC” folder where you installed Color Chat. (For example C:\Program files (x86)\Color Chat 1_0\music\plastiq.ini). Then Click OK .

2. If you re-install Color Chat 1.0, you should always use the same location that you originally installed to (for Windows Vista & Windows 7).

3. For both Windows Vista & Windows 7 , always remember to re-start your computer when you make a change to the UAC setting. Re-starting allows changes to take effect.
